## Abstracts

Inhalers are used to treat chronic obstructive pulmonary disease (COPD), such as asthma, by delivering bronchodilator medication to the airway directly, without passing through the blood. A smart inhaler is an inhaler that integrates connectivity with a mobile app, via Bluetooth, for instance. These devices are built with sensor technology that helps record data about the time and date of use, and the location of the patient at each use. The global smart inhalers market size is projected to grow by USD 536 million from 2022 to 2028, registering a CAGR of 21.7 percent, according to a new report by Gen Consulting Company.

The report provides in-depth analysis and insights regarding the current global market scenario, latest trends and drivers into global smart inhalers market. It offers an exclusive insight into various details such as market size, key trends, competitive landscape, growth rate and market segments. This study also provides an analysis of the impact of the COVID-19 crisis on the smart inhalers industry.
