Abstracts

According to the latest data, the market size of the global vitiligo treatment sector is expected to rise by USD 0.5 billion with a CAGR of 5.55% by the end of 2029. Vitiligo is a long-term condition characterized by the loss of skin pigmentation, resulting in white patches on the skin. The goal of treatment is to restore or improve the color of the affected skin areas. Treatment options for vitiligo include topical corticosteroids, topical calcineurin inhibitors, psoralen plus ultraviolet A (PUVA) therapy, narrowband ultraviolet B (NB-UVB) therapy, excimer laser, and surgical procedures like skin grafting and tattooing.

Increasing awareness about vitiligo and its treatment options, along with growing societal acceptance, leads to higher demand for effective treatments. As people become more informed about vitiligo and its impact, they seek suitable treatment options, driving market growth.
