Abstracts

Squalane is derived by hydrogenation of squalene. It is naturally present in the skin lipid barrier of plants, animals and humans, preventing moisture loss while restoring skin's suppleness and flexibility. In contrast to squalene, due to the complete saturation of squalane, it is not subject to auto-oxidation. This fact, coupled with lower costs associated with squalane, make it desirable in cosmetic applications. Squalene is a high-end, oil-free moisturizing ingredient used in many cosmetics that, until recently, was extracted primarily from the liver of deep sea sharks. Squalene is quickly absorbed into the skin without leaving an oily residue and also mixes well with other oils, which will augment its demand in personal care and cosmetic products. Squalene is also used in the manufacture of vaccines.

The global squalane market size is projected to reach \$226.4 million by 2026, registering a CAGR of 8.58% from 2020 to 2026. The squalane market is segmented on the basis of product, application, and region. The report offers a breakdown of market shares by product, including Animal-based Squalane, Plant-derived Squalane, Biosynthetic Squalane. By application, the squalane market is classified into Cosmetics, Dietary Supplements, Pharmaceuticals. On the basis of region, the squalane industry is analyzed across North America, Europe, Asia-Pacific, South America and MEA (the Middle East, and Africa).
