## Abstracts

Squalane is a hydrocarbon derived by hydrogenation of squalene. In contrast to squalene, due to the complete saturation of squalane, it is not subject to auto-oxidation. This fact, coupled with lower costs associated with squalane, make it desirable in cosmetic applications, where it is used as an emollient and moisturizer. The hydrogenation of squalene to produce squalane was first reported in 1916.

The report covers forecast and analysis for the squalane market on a global and regional level. The study provides historic data of 2012-2016 along with a forecast from 2017 to 2022 based on both volumes and revenue. The study includes drivers and restraints for the squalane market along with the impact they have on the demand over the forecast period. Additionally, the report includes the study of opportunities available in the squalane market on a global level.

The report has been prepared based on the synthesis, analysis, and interpretation of information about the global squalane market collected from specialized sources. The competitive landscape section of the report provides a clear insight into the market share analysis of key industry players.
