Abstracts

Strontium chloride is an inorganic compound with the formula SrCl2. It is used as a raw material to obtain other strontium compounds. Strontium chloride is also used as a coloring agent (red) in glass making and metallurgy. As one of the safest metals found in fireworks, strontium chloride is used as a source of redness. Strontium chloride is also found in some toothpastes intended to reduce tooth sensitivity. It forms a barrier over the nerve endings in tooth dentin that is exposed by receding gums.

The global strontium chloride market size was valued at \$26.92 million in 2019 and is projected to reach \$34.73 million by 2026, registering a CAGR of 5.22% from 2020 to 2026. Strontium chloride is commonly used in the manufacturing of glass for LCD-TFT screens. It is also used in the manufacturing of strontium ferrites for permanent magnets. Strontium chloride is used for the formulation of high purity strontium salts, pigments. Another use is as an inexpensive colorant in fireworks. Strontium and its salts emit a brilliant red color in flame. Strontium chloride is also used in the production of toothpaste for tooth sensitivity.

The strontium chloride market is segmented on the basis of product, application, and region. The report offers a breakdown of market shares by product, including Strontium Chloride Hexahydrate, Strontium Chloride Anhydrous.
