Abstracts

Succinic acid is a four-carbon dicarboxylic acid (butanedioic acid or amber acid, $C_4H_6O_4$). Industrially, succinic acid is currently produced petrochemically from maleic acid and is thus based on petroleum. Succinic acid can be produced by fermentation as it is an intermediate of the tricarboxylic acid cycle (TCA, citrate cycle) and one of the end products of anaerobic metabolism. Succinic acid offers great potential as a platform chemical in the application areas of bio-based plastics, solvents, plasticizers, adhesives, and resins. The global succinic acid market is projected to grow at a compound annual growth rate (CAGR) of 4.3% during the forecast period 2021-2027, according to the new report published by Gen Consulting Company.

The report provides in-depth analysis and insights regarding the current global market scenario, latest trends and drivers into global succinic acid market.
