Abstracts

A surgical mask is a loose-fitting, disposable device that creates a physical barrier between the mouth and nose of the wearer and potential contaminants in the immediate environment. This helps reduce airborne transmission of pathogens and other aerosolized contaminants between the wearer and nearby people via respiratory droplets ejected when sneezing, coughing, forceful expiration or unintentionally spitting when talking, etc. The market for surgical mask worldwide is expected to reach USD 1,336 million by 2028, recording a CAGR of -21.3% over the forecast period as per the latest report by Gen Consulting Company.
