Abstracts

Surgical sutures are medical devices used to hold body tissues together after an injury or surgery. Application generally involves using a needle with an attached length of thread. There are two common types of sutures, absorbable and non-absorbable. Absorbable sutures will naturally break down in the body over time while non-absorbable sutures are made of synthetic material that is removed after a certain period of time. Gen Consulting Company estimates the global surgical suture market will total USD 5,212 million by 2028, an average annual growth of 5.3 percent during the forecast period, according to the latest edition of the Global Surgical Suture Market Report.
