

Global Telecommunications Tower Market 2023

<https://marketpublishers.com/r/G39BDDAFB9E2EN.html>

Date: June 2023

Pages: 92

Price: US\$ 2,450.00 (Single User License)

ID: G39BDDAFB9E2EN

Abstracts

A telecommunications tower, also known as a cell tower or mobile tower, is an essential infrastructure designed to support antennas and other equipment used for wireless communication. These towers play a vital role in transmitting and receiving signals for various telecommunications services, including mobile phone networks, wireless internet, and broadcast services.

The global telecommunications tower market is projected to reach a valuation of 5.8 million units by 2029, with a compound annual growth rate (CAGR) of 3.29% from 2023 to 2029, according to the latest market data. This growth is driven by the increasing reliance on wireless communication services, such as mobile phones, smartphones, and wireless internet, which has created a surge in demand for telecommunications towers.

As more people embrace these services and the consumption of data continues to rise, there is a pressing need for expanded network coverage and capacity. This requirement necessitates the deployment of additional telecommunications towers to meet the growing demand and ensure seamless communication experiences for users.

Telecommunications towers are of utmost importance in both urban and rural areas. In urban areas, these towers are essential to handle the high population density and the ever-increasing demands for data traffic. The concentration of users in cities requires robust network infrastructure supported by a network of towers strategically placed to provide adequate coverage and capacity.

In rural areas, the deployment of telecommunications towers is crucial to extend network coverage and bridge the digital divide. These towers play a significant role in bringing reliable communication services to remote locations, ensuring that people in these areas have access to the same level of connectivity as their urban counterparts.

By expanding network coverage to rural areas, telecommunications towers contribute to enabling economic growth, empowering communities, and facilitating access to vital services such as healthcare and education.

The report covers market size and growth, segmentation, regional breakdowns, competitive landscape, trends and strategies for global telecommunications tower market. It presents a quantitative analysis of the market to enable stakeholders to capitalize on the prevailing market opportunities. The report also identifies top segments for opportunities and strategies based on market trends and leading competitors' approaches.

Market Segmentation

Fuel type: renewable, non-renewable

Tower type: lattice towers, guyed towers, monopole towers, stealth towers

Installation: roof top, ground based

Ownership: operator owned, joint venture, private owned, MNO captive

Region: Asia-Pacific, Europe, North America, Middle East and Africa (MEA), South America

In terms of fuel type, the global telecommunications tower market can be segmented into renewable and non-renewable sources. As of 2022, the non-renewable segment accounted for the largest volume share in the market. On the other hand, renewable energy sources, such as solar power, wind power, and hydropower, offer sustainable alternatives for powering telecommunications towers. These sources harness natural elements and have the advantage of being environmentally friendly and significantly reducing carbon emissions. Additionally, advancements in renewable energy technologies have made them more efficient, reliable, and cost-effective over time.

The telecommunications tower market exhibits further segmentation based on tower type, which includes lattice towers, guyed towers, monopole towers, and stealth towers. In the year 2022, the lattice towers segment emerged as the dominant player, holding the largest market share. Lattice towers are extensively utilized in the telecommunications industry due to their exceptional structural stability and capacity to withstand the weight of heavy equipment. Lattice towers are characterized by their intricate framework, consisting of a network of interconnected metal beams or structures. This design provides them with remarkable strength and durability, making them suitable for supporting various telecommunication equipment, including antennas, transmitters, and receivers. Their ability to withstand heavy loads and extreme weather conditions makes them highly reliable and preferred by telecommunication companies.

When considering installation methods, the telecommunications tower market can be divided into rooftop and ground-based installations. The ground-based segment captured the largest share of the market in 2022. One key advantage of ground-based installations is the ease of access and maintenance they offer. Unlike rooftop installations, which require technicians to navigate through complex building structures and potentially face additional safety hazards, ground-based installations provide a more straightforward and accessible environment for installation and maintenance activities. This ease of access allows for faster deployment and efficient troubleshooting, ultimately reducing downtime and improving overall service reliability.

Ownership is another important factor in the telecommunications tower market. The market can be categorized into operator-owned, joint venture, private-owned, and mobile network operator (MNO) captive towers. According to the research, the operator-owned segment held the largest share in the global telecommunications tower market. Operator-owned towers refer to those that are directly owned and operated by telecommunications service providers themselves. These towers serve as a crucial component of their network infrastructure, enabling the provision of reliable and widespread coverage to their customers. By owning these towers, operators have greater control over the quality, maintenance, and expansion of their network, allowing them to meet the growing demands of their subscribers.

The telecommunications tower market is geographically segmented into Asia-Pacific, Europe, North America, the Middle East and Africa (MEA), and South America. As of 2022, the Asia-Pacific region emerged as the dominant player in terms of market volume share. This significant market share can primarily be attributed to the rapid expansion and development of the telecommunications industry in countries such as China and India, where there is a substantial demand for enhanced network connectivity.

In the Asia-Pacific region, China has witnessed remarkable growth in its telecommunications sector. The country's large population and increasing urbanization have fueled the demand for improved telecommunications infrastructure to meet the needs of its vast consumer base. The deployment of 5G networks, the rise in smartphone usage, and the growing demand for high-speed internet services have all contributed to the increased requirement for telecommunications towers in China.

Similarly, India has experienced significant advancements in its telecommunications industry. With a population of over 1.3 billion people, India represents a massive market

for telecommunication services. The government's initiatives to promote digital connectivity and the increasing adoption of smartphones have resulted in a surge in data consumption and the need for robust telecommunications infrastructure. This has led to a substantial demand for telecommunications towers across the country.

Major Companies and Competitive Landscape

The market research report covers the analysis of key stake holders of the global telecommunications tower market. Some of the leading players profiled in the report include American Tower Corporation, AT&T Inc., Cellnex Telecom S.A., China Tower Corporation, CMPak Limited, Crown Castle Inc., Deutsche Telekom AG, GTL Infrastructure Limited, Helios Towers plc, IHS Holdings Limited, Indus Towers Limited, Orange SA, PT Telkom Indonesia Tbk, SBA Communications Corporation, Tele2 AB, Telecommunications Towers Company Ltd., Telenor ASA, Telesites S.A.B de C.V., Telia Company AB, Telxius Telecom S.A., T-Mobile US Inc., Vantage Towers AG, among others. In this report, key players and their strategies are thoroughly analyzed to understand the competitive outlook of the market.

Scope of the Report

To analyze and forecast the market size of the global telecommunications tower market.
To classify and forecast the global telecommunications tower market based on fuel type, tower type, installation, ownership, region.
To identify drivers and challenges for the global telecommunications tower market.
To examine competitive developments such as mergers & acquisitions, agreements, collaborations and partnerships, etc., in the global telecommunications tower market.
To identify and analyze the profile of leading players operating in the global telecommunications tower market.

Why Choose This Report

Gain a reliable outlook of the global telecommunications tower market forecasts from 2023 to 2029 across scenarios.
Identify growth segments for investment.
Stay ahead of competitors through company profiles and market data.
The market estimate for ease of analysis across scenarios in Excel format.
Strategy consulting and research support for three months.
Print authentication provided for the single-user license.

Contents

PART 1. INTRODUCTION

- 1.1 Description
- 1.2 Objectives of The Study
- 1.3 Market Segment
- 1.4 Years Considered for The Report
- 1.5 Currency
- 1.6 Key Target Audience

PART 2. RESEARCH METHODOLOGY

- 2.1 Primary Research
- 2.2 Secondary Research

PART 3. EXECUTIVE SUMMARY

PART 4. MARKET OVERVIEW

- 4.1 Introduction
- 4.2 Drivers
- 4.3 Restraints

PART 5. GLOBAL TELECOMMUNICATIONS TOWER MARKET BY FUEL TYPE

- 5.1 Renewable
- 5.2 Non-renewable

PART 6. GLOBAL TELECOMMUNICATIONS TOWER MARKET BY TOWER TYPE

- 6.1 Lattice towers
- 6.2 Guyed towers
- 6.3 Monopole towers
- 6.4 Stealth towers

PART 7. GLOBAL TELECOMMUNICATIONS TOWER MARKET BY INSTALLATION

- 7.1 Roof top

7.2 Ground based

PART 8. GLOBAL TELECOMMUNICATIONS TOWER MARKET BY OWNERSHIP

8.1 Operator owned

8.2 Joint venture

8.3 Private owned

8.4 MNO captive

PART 9. GLOBAL TELECOMMUNICATIONS TOWER MARKET BY REGION

9.1 Asia-Pacific

9.2 Europe

9.3 North America

9.4 Middle East and Africa (MEA)

9.5 South America

PART 10. COMPANY PROFILES

10.1 American Tower Corporation

10.2 AT&T Inc.

10.3 Cellnex Telecom S.A.

10.4 China Tower Corporation

10.5 CMPak Limited

10.6 Crown Castle Inc.

10.7 Deutsche Telekom AG

10.8 GTL Infrastructure Limited

10.9 Helios Towers plc

10.10 IHS Holdings Limited

10.11 Indus Towers Limited

10.12 Orange SA

10.13 PT Telkom Indonesia Tbk

10.14 SBA Communications Corporation

10.15 Tele2 AB

10.16 Telecommunications Towers Company Ltd.

10.17 Telenor ASA

10.18 Telesites S.A.B de C.V.

10.19 Telia Company AB

10.20 Telxius Telecom S.A.

10.21 T-Mobile US Inc.

10.22 Vantage Towers AG
