## Abstracts

Trimellitic anhydride (TMA) is a white crystalline flake material with a primary use in the synthesis of trimellitate esters which are plasticisers used to modify the properties primarily of PVC and other plastics. TMA is also used as a resin component for resins including powder coating resin and in some curing agent formulations for Epoxy resins. It is also used as an intermediate for the synthesis of surface coatings chemicals, adhesives, polymers, dyes, printing inks, pharmaceuticals and agrochemicals. It has a key use as a component in the production of heat proof varnishes and paints as well as wire enamels and can coating resins.
