## Abstracts

Vegetable oils are created from the extraction of oils from plant materials. This process involves the crushing and removing of the unwanted components, which is typically achieved through mechanical pressing. Vegetable oil extraction can also be completed by chemical extraction using a solvent. Vegetable oils are composed of active ingredients, including the family of fatty acids (such as omega 3, omega 6 and omega 9) and vitamins. These are lipids that help maintain a good level of skin hydration, tone the skin up, improve suppleness and regenerate it. The global vegetable oil market is expected to increase by 57.5 million tons, at a compound annual growth rate (CAGR) of 4.1% from 2023 to 2029, according to the latest edition of the Global Vegetable Oil Market Report.
