## Abstracts

Wheelchair is a manually-operated or power-driven device designed primarily for use by an individual with a mobility disability for the main purpose of indoor or of both indoor and outdoor locomotion. Providing appropriate wheelchairs not only enhances mobility but begins a process of opening up a world of education, work and social life. In addition to providing mobility, an appropriate wheelchair benefits the physical health and quality of life of the users by helping in reducing common problems such as pressure sores, progression of deformities and improve respiration and digestion. According to Gen Consulting Company, the global wheelchair market is set to achieve an incremental growth of USD 5 billion, accelerating at a CAGR of almost 7.1% during the forecast period 2022-2028. Increase in geriatric population, rise in spinal cord injuries, increase in incidence of disabilities and accidents, rising consumer disposable income and improving standards of living, are expected to boost the market growth in the coming years.
