Abstracts

Industrial protective clothing refers to clothing designed to protect workers from various hazards in industrial settings, such as chemical, biological, thermal, and mechanical hazards. These hazards can include exposure to harmful chemicals, extreme temperatures, sharp objects, and other potential dangers. Industrial protective clothing is typically made from specialized materials that provide protection against specific hazards. For example, chemical-resistant clothing is made from materials that can withstand exposure to hazardous chemicals, while heat-resistant clothing is made from materials that can withstand high temperatures. The industrial protective clothing in North America market is expected to increase by USD 0.7 billion, at a compound annual growth rate (CAGR) of 4.3% from 2023 to 2029, according to the latest edition of the Industrial Protective Clothing Market in North America Report.
