Abstracts

Oncology drugs are medications that are used to treat cancer. These drugs work by targeting and killing cancer cells or slowing down their growth and spread. The oncology drug market in China is a significant and rapidly growing market, driven by the increasing incidence of cancer in the country and the growing demand for effective cancer treatments. According to the latest research, the oncology drug market in China is poised to grow by USD 41.0 billion during 2023-2029, progressing at a CAGR of 12.46% during the forecast period. One of the key drivers of growth in the oncology drug market in China is the increasing incidence of cancer in the country. According to the National Cancer Center of China, the number of new cancer cases in China is expected to reach 4.5 million by 2025. This has led to a growing demand for effective cancer treatments and has created opportunities for pharmaceutical companies to develop and market new oncology drugs. Another factor driving growth in the oncology drug market in China is the increasing government support for cancer research and treatment. The Chinese government has launched several initiatives to improve cancer prevention, diagnosis, and treatment, and has increased funding for cancer research and development. In addition, the rise of precision medicine and targeted therapies has led to the development of new oncology drugs that are more effective and have fewer side effects compared to traditional chemotherapy. These drugs are designed to target specific cancer cells or genetic mutations, and are personalized to each patient's unique cancer profile.

This industry report offers market estimates of the China market, followed by a detailed analysis of the type, and product. The China market data on oncology drug can be segmented by type: breast, colorectum, liver, lung cancer, stomach, thyroid, others.
