Abstracts

The report analyzes and presents an overview of High-Temperature Insulation market worldwide. 'Insulations are materials that cost-effectively prevent the transmission of cold air or heat from the user's building. Insulations create a low-level barrier to block the outer humidity or dampness from penetrating inside the user's home. Residents living in warm or cold climatic regions usually prefer high temperature insulations for improving their home's atmosphere. High temperature insulation (HTI) products deliver excellent compressive strength, and are sustainable at higher temperatures. HTI products are extensively used in industrial, emission control and fire protection applications.'

Supported with 1 market data table, the report provides a review of various types of High-Temperature Insulation, growth drivers, and strategic industry activities of major companies worldwide. In addition, 56 companies operating in the High-Temperature Insulation arena worldwide including Advanced Industrial Solutions Ltd., Cabot Corporation, GrafTech International Ltd., ISOLITE Group, Johns-Manville Corporation, Knauf Insulation, Morgan Advanced Materials PLC, Nichias Corporation, Rath AG, and Temtek Solutions and others are profiled.

Contents

1. HIGH TEMPERATURE INSULATION - A MARKET OVERVIEW

Insulation - A Brief Introduction

High Temperature Insulation - Definition

High Temperature Insulation - Types

Fiber-based Insulation

Foil-based Insulation

Rigid Insulation

Polystyrene Insulation

Industrial Application
