3D printing (3DP) is a type of rapid prototyping technology, also known as additive manufacturing. It is based on digital model files and uses adhesive materials such as powdered metal or plastic to construct structures through layer-by-layer printing technology of objects. 3D printing is usually achieved using digital technology material printers. It is often used to make models in the fields of mold manufacturing, industrial design and other fields, and is gradually used in the direct manufacturing of some products. There are already parts printed using this technology. In the medical field, with the development of precision medicine and personalized medicine, 3D printing has been widely used in implants, orthopedics, dentistry, complex surgical instruments, biological organs and tissues, hearing aid shells, pharmaceuticals and other fields.
