Abstracts

According to our (Global Info Research) latest study, the global Access Switches market size was valued at US\$ 2171 million in 2024 and is forecast to a readjusted size of USD 3453 million by 2031 with a CAGR of 6.9% during review period.

Access switch generally locates at the access layer for connecting the majority of devices to the network, therefore it usually has high-density ports. It is the most commonly-used gigabit Ethernet switch which communicates directly with the public Internet, mostly used in offices, small server rooms, and media production centers. Both managed and unmanaged switches can be deployed as access layer switch.

Access switch is the only one that directly interacts with end-user devices. Because an access network switch connects the majority of devices to the network, it normally has the highest port density of all switch types. In spite of the high port count, access switch usually provides the lowest throughput per port. For example, most modern access switches come with a 10/100/1000Mbps copper Ethernet connection to end devices. While core and distribution switches commonly use between 10Gbps and 100Gbps fiber optic ports.

This report is a detailed and comprehensive analysis for global Access Switches market.
