Acrylic electrophoretic paint is an electrophoretic paint based on acrylic resin, which is usually used to form a uniform, corrosion-resistant protective film on the metal surface through the electrophoretic coating process. Electrophoretic coating is a process in which charged particles (resin particles or pigments in the paint) are deposited on the surface of a conductive substrate under the action of an electric field. Acrylic electrophoretic paint is mainly composed of acrylic resin, curing agent and other additives.
