According to our (Global Info Research) latest study, the global Acrylic Liquid Optically Clear Adhesive (LOCA) market size was valued at US\$ 196 million in 2025 and is forecast to a readjusted size of US\$ 269 million by 2032 with a CAGR of 4.5% during review period.

Acrylic Liquid Optically Clear Adhesive (LOCA) is a high-transparency, UV- or heat-curable liquid acrylic adhesive designed for direct optical bonding of displays, cover lenses, and touch panels, offering excellent light transmission, gap filling, shock absorption, and durability while eliminating air gaps and improving visibility, contrast, and mechanical strength in consumer electronics, automotive displays, industrial screens, and optical sensor modules.

The Acrylic LOCA industry chain begins upstream with suppliers of acrylic monomers, oligomers, photoinitiators, UV stabilizers, rheology modifiers, and specialty additives, then transitions midstream into adhesive formulation, purification, viscosity control, UV-curing system development, packaging, and dispensing equipment integration, and finally moves downstream to display makers, optical bonding houses, automotive display integrators, sensor module producers, and electronics OEMs that use LOCA for bonding touch panels, cover lenses, OLED screens, curved displays, and optical modules, enabling enhanced visibility, reduced glare, improved durability, and superior optical performance in a wide range of electronic applications.

Planned and ongoing LOCA-related projects include expansion of UV-curable acrylic adhesive production in China, Korea, and Taiwan to support OLED and automotive display growth; new manufacturing lines focused on low-yellowing, flexible-display-

compatible LOCA; investment in clean-environment dispensing and bubble-free packaging technologies; collaborations between display panel makers and adhesive suppliers to customize LOCA for microLED, AR/VR optics, and curved automotive screens; and the establishment of regional LOCA curing equipment centers and application labs aimed at reducing time-to-qualification, improving reliability testing, and increasing production capacity for next-generation optoelectronic bonding materials.
