According to our (Global Info Research) latest study, the global Active Phased Array Multifunction Radar market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Phased array radar, or Electronically Scanned Array Radar (AESA), refers to a type of radar that changes the scanning direction of the beam by changing the synthesis method of the beam emitted by the antenna surface array. Each radiator of the active phased array radar is equipped with a transmitting/receiving component, and each component can generate and receive electromagnetic waves by itself. Because its phased array surface contains a large number of active components, it is called an active phased array radar. Compared with mechanical scanning radar and passive phased array radar, active phased array radar has advantages in power consumption, resolution, reliability, etc. The main disadvantage is the high price.

The Active Phased Array Multifunction Radar is gradually gaining prominence in the market with its expanding market size. Its unique multifunctionality has garnered widespread attention in both military and civilian sectors. In military applications, it enhances operational efficiency through target detection, tracking, and guidance systems. Simultaneously, in civilian domains, it finds applications in weather forecasting, air traffic control, and maritime monitoring. In the future, the Active Phased Array Multifunction Radar is poised for further development as technological advancements continue to improve its performance, and its applicability expands, presenting more opportunities and challenges in the market.
