Abstracts

According to our (Global Info Research) latest study, the global Active Vibration Isolation market size was valued at US\$ 273 million in 2024 and is forecast to a readjusted size of USD 413 million by 2031 with a CAGR of 6.2% during review period.

Active vibration isolation systems contain a feedback circuit which consists of a sensor (for example a piezoelectric accelerometer or a geophone), a controller, and an actuator. The acceleration (vibration) signal is processed by a control circuit and amplifier. Then it feeds the electromagnetic actuator, which amplifies the signal. As a result of such a feedback system, a considerably stronger suppression of vibrations is achieved compared to ordinary damping.

Based on product type, the Springs Levelling System segment held a significant revenue share of the Active Vibration Isolation market, accounting for 58.10% in 2019.

Based on application, the Semiconductor Industry segment accounted for significant consumption market share in 2019 with 42.79%, in terms of volume.

Asia Pacific is the largest consumption market of Active Vibration Isolation, accounting for 40.78% of the global share in 2019, in terms of volume.

The increasing adoption of Active Vibration Isolation is expected to offer lucrative opportunities for vendors. In 2019, KURASHIKI KAKO, TMC and Tokkyokiki Corporation ranked Top 3 of the revenue share in global market, accounting for 45.34% in total.
