Adjustable Air Differential Pressure Switch is a control switch used to monitor the pressure difference between two points, triggering circuit switching when the differential pressure reaches a preset value. The product employs a diaphragm sensing mechanism and an adjustable spring setting system, offering sensitive response and convenient setting. It is widely used in clean rooms, ventilation systems, and air filtration equipment for monitoring filter blockage, maintaining positive/negative pressure differentials, or implementing process safety interlocks. The global market for adjustable air differential pressure switches is approximately \$327 million USD in 2025, with an annual sales volume of about 7.8 million units. The projected CAGR for the next five years is about 6.0%. The market price is \$41.9 per unit, single-line annual production capacity ranges from 120,000 to 200,000 units, and industry gross margins are generally between 30% and 40%.
