According to our (Global Info Research) latest study, the global Adjustable Reamers market size was valued at US\$ 329 million in 2024 and is forecast to a readjusted size of USD 431 million by 2031 with a CAGR of 3.9% during review period.

An adjustable reamer is a cutting tool used in machining processes to enlarge or finish a hole to a precise size and smoothness. Unlike standard reamers, which are designed for a specific hole size, adjustable reamers can be customized to different diameters by adjusting the blades or cutters. This adjustability makes them versatile and ideal for applications where precise hole size control is needed, but the exact diameter is not predetermined.
