Adult Rescue Cervical Collars are medical devices designed to immobilize and support the cervical spine (neck) in emergency situations.

Adult Rescue Cervical Collars are typically used when there is a suspected neck injury, trauma, or during emergency medical response. The primary purpose of an adult emergency cervical collar is to stabilize the cervical spine and limit neck movement. They are commonly used in cases where there is a suspicion of neck injury, such as those resulting from motor vehicle accidents, falls, or sports injuries, to maintain the neck in a neutral position until further assessment can be performed. These collars are usually constructed from rigid materials like plastic or foam to provide substantial support. They often have padding on the inside to enhance patient comfort.
