AED Wall Cabinet is a storage cabinet designed for storing automatic external defibrillators (AEDs). It is usually installed on the wall to ensure that the AED equipment is easily accessible in emergency situations. The cabinet is usually made of durable, waterproof and anti-theft materials, which can provide protection for the AED equipment and prevent damage to the equipment by dust, moisture, sunlight or other environmental factors. At the same time, AED wall cabinets are usually equipped with transparent windows to facilitate checking the status of the equipment at any time to ensure the visibility and accessibility of the equipment. The temperature control system inside and outside the equipment can also keep the equipment in the best working environment. Wall cabinets are usually used in public areas, office buildings, schools, commercial areas and other places to provide defibrillation first aid in the first time in emergency situations such as cardiac arrest.
