According to our (Global Info Research) latest study, the global Agglomerated Welding Flux market size was valued at US\$ 702 million in 2024 and is forecast to a readjusted size of USD 1012 million by 2031 with a CAGR of 5.3% during review period.

Agglomerated welding flux refers to a high-quality, efficient, energy-saving, and environmentally friendly solder flux. It refers to processing the prepared wet solder into the required particles and calcining them at a high temperature of 750-1000 °C to form fine particles, thus obtaining sintered solder. This flux is smokeless, odorless, arc free, and splash free during welding. The production and manufacturing process has no environmental pollution, low energy consumption, and fully utilizes raw materials, which is in line with national industrial development policies.
