According to our (Global Info Research) latest study, the global AGRP Polyclonal Antibody market size was valued at US\$ 5.8 million in 2024 and is forecast to a readjusted size of USD 7.1 million by 2031 with a CAGR of 2.9% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

AGRP polyclonal antibody (Agrp polyclonal antibody) is a specific antibody against AGRP (Agouti-related protein, also known as Agrt or Art) protein. It is a type of polyclonal antibody, that is, a mixture of antibodies produced by multiple different immune cell clones. These cloned antibodies can recognize and bind to multiple different antigenic epitopes on the AGRP protein, thereby providing comprehensive immune recognition capabilities. AGRP polyclonal antibodies are usually obtained by injecting AGRP or its related antigens into animals (such as guinea pigs) to stimulate the immune system to produce an immune response, and then separated from the animal serum.

AGRP polyclonal antibodies have a wide range of application needs in biomedical research, drug development, and clinical diagnosis. In particular, in the study of metabolic diseases such as obesity and diabetes, AGRP is a key regulatory factor, and its polyclonal antibodies have become an important tool for studying the pathogenesis and treatment of these diseases. AGRP polyclonal antibodies usually have high specificity and sensitivity, can accurately identify and bind to AGRP proteins, and provide researchers with reliable experimental tools. In summary, the AGRP polyclonal

antibody market has broad development prospects in the current biomedical research and drug development fields.
