AI AppSec assistants are tools that apply artificial intelligence (AI) and machine learning (ML) to help developers identify and fix vulnerabilities throughout the software development lifecycle. These solutions embed directly into developers' existing environments to provide real-time application security (AppSec) insights, contextual explanations, and automated or semi-automated remediation. While AI coding assistants help developers with general programming tasks, AI AppSec assistants specifically aid with code security. Businesses use AI AppSec assistants to strengthen secure coding practices and improve collaboration between development and security teams. These tools help maintain a "secure by default" approach to software development. AI AppSec assistants support workloads ranging from small internal applications to complex enterprise systems with advanced security requirements.
