An AI Demand Forecasting System is enterprise software that uses data and AI analytics to predict future demand and support sales, inventory, and production planning. In 2025, global AI Demand Forecasting System production reached approximately 7,800 units, with an average global market price of around US\$ 102,000 per unit. Gross Profit Margin:68%.The AI Demand Forecasting System industry chain starts with upstream data infrastructure and core technologies, including enterprise data sources, cloud computing platforms, AI frameworks, and data integration tools. Midstream players focus on system development, algorithm integration, and platform deployment, often embedding forecasting capabilities into ERP, SCM, and planning software. Downstream, end users such as retailers, consumer packaged goods companies, manufacturers, and energy enterprises adopt these systems to improve demand visibility, inventory efficiency, and planning accuracy across their operations. AI Demand Forecasting Systems are evolving from decision support tools into core operational engines for enterprises. As data quality and automation improve, these systems will increasingly drive autonomous planning and real time decision making. Vendors that can combine strong industry knowledge with scalable platforms will gain long term competitive advantages, especially in cost sensitive and high volatility markets.
