Abstracts

According to our (Global Info Research) latest study, the global AI Designed Antibodies market size was valued at US\$ 422 million in 2025 and is forecast to a readjusted size of US\$ 1932 million by 2032 with a CAGR of 24.2% during review period.

AI-designed antibodies refer to antibody discovery and engineering workflows that use machine learning/deep learning models to computationally generate, screen, and optimize antibody sequences and structures. By integrating antigen structure/epitope cues, antibody repertoire data, and experimental measurements (affinity, specificity, stability, immunogenicity, and developability), AI enables a closed loop of candidate generation, in silico ranking, multi-objective optimization, and wet-lab validation—accelerating the creation of improved antibody molecules and supporting tasks such as de novo design, affinity maturation, humanization, and developability risk reduction.
