The exhaust type micropipette, also often called 'exhaust type pipette gun' or simply 'pipette gun', is a precision experimental instrument specially used for measuring and transferring micro-liquid volumes. It exhausts air through the drive of the piston, creates a vacuum in the closed tube, and then absorbs the liquid and transfers it to other containers. This type of pipette has high precision and high accuracy, and is widely used in experimental research in the fields of biology, chemistry and clinical medicine.
