Airport Approach Lighting Systems, or Approach Lighting System (ALS), is a type of auxiliary navigation lighting that provides a prominent visual reference for the runway entrance location and direction when aircraft are landing at night or under conditions of low visibility.

Installed at the approach end of the runway, the system consists of a series of crossbar lights, flashing lights (or a combination of both) extending outward from the runway. ALS is typically used on runways with instrument approach procedures, enabling pilots to visually distinguish the runway environment and help align the aircraft with the runway as it approaches the predetermined point.
