According to our (Global Info Research) latest study, the global Alkaline Button Battery market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Button battery, refers to a battery with a size like a small button. Generally speaking, the diameter is larger and the thickness is thinner (compared to cylindrical batteries such as AA batteries on the market). Button batteries are divided into batteries from the perspective of appearance. The corresponding batteries are classified into cylindrical batteries, square batteries, and special-shaped batteries.

Generally speaking, there are two types of button batteries, rechargeable and non-rechargeable. The rechargeable ones include 3.6V rechargeable lithium-ion button batteries (LIR series), 3V rechargeable lithium-ion button batteries (ML or VL series); Charging includes 3V lithium-manganese button batteries (CR series) and 1.5V alkaline zinc-manganese button batteries (LR and SR series); the more common button batteries are AG3, AG10, AG13 batteries used in toys and gifts, computers The battery on the motherboard, the model is CR2032, which is used for CR2025 in the electronic dictionary, and for CR2016 or SR44, SR626 on the electronic watch; the English letters in front of the model name of the button battery indicate the type of battery, the number indicates the size, and the first two The first two digits represent the diameter, and the last two digits represent the thickness. Button batteries are also divided into two categories: chemical batteries and physical batteries, and chemical batteries are the most commonly used. They consist of an anode (positive pole), a cathode (negative pole) and their electrolyte, among others. Its appearance is made of stainless steel, and it is used as the positive pole, and its negative pole is a stainless steel circular cover.

There is a sealing ring for insulation between the positive pole and the negative pole. . There are many types of button batteries, most of which are named after the materials used, such as silver oxide batteries, lithium batteries, alkaline manganese batteries, etc. Button batteries are not within the scope of the mercury-free ban on general dry batteries, and a small amount of mercury is still allowed, so they must be recycled in accordance with the instructions of environmental protection agencies.
