All-ceramic crown restoration refers to a porcelain restoration that covers all or part of the crown surface and does not contain a metal inner crown. This restoration is made of high-strength ceramic materials that are similar to the color of teeth to restore the shape, function and beauty of teeth. All-ceramic crown restorations have similar translucency and color to natural teeth, and the restored teeth are more natural and beautiful, especially suitable for aesthetic restoration of anterior teeth. All-ceramic materials have no irritation to oral tissues, have good biocompatibility, and are beneficial to oral health.

With the improvement of living standards and the enhancement of oral health awareness, consumers have an increasing demand for beautiful, durable and biocompatible all-ceramic crown restorations. Especially in the field of aesthetic restoration of anterior teeth, all-ceramic crowns are favored for their translucency and aesthetics similar to natural teeth. In the future, with the continuous advancement of material science and manufacturing technology, the performance of all-ceramic crown restorations will be further improved. For example, the research and development and application of new materials will improve the strength, aesthetics and biocompatibility of
