According to our (Global Info Research) latest study, the global Aluminium-Lithium Alloy market size was valued at US\$ 2484 million in 2024 and is forecast to a readjusted size of USD 3259 million by 2031 with a CAGR of 4.0% during review period.

Aluminum Lithium Alloys is one kind of alloys which mainly includes aluminum and lithium, it also has some other elements, like copper, zirconium and so on. The key composition is aluminum and it occupies higher than 95%.

Aluminum?lithium alloys (Al-Li) are a series of alloys of aluminum and lithium, often also including copper and zirconium. Since lithium is the least dense elemental metal these alloys are significantly less dense than aluminum. Commercial Al?Li alloys contain up to 2.45% by weight of lithium.

After more than 90 years of development, aluminum lithium alloys have entered a mature stage and have been widely used in some fields. The rapid development of China's aerospace industry has driven the market demand for aluminum lithium alloys. Although with strong national support and the efforts of three five-year plans, China has made significant progress in the production and application of aluminum lithium alloys, there is still a significant gap in the development and production of aluminum lithium alloys compared to countries such as the United States and Russia.
