According to our latest research, the global Alzheimer's Blood Tests market size will reach USD million in 2031, growing at a CAGR of %over the analysis period.

Alzheimer's blood tests are diagnostic tools designed to detect biomarkers associated with Alzheimer's disease in the bloodstream. These tests aim to identify proteins such as beta-amyloid and tau, which are hallmarks of the disease, as well as other indicators of neural damage and inflammation. The development of these tests offers a less invasive and potentially more accessible alternative to traditional diagnostic methods like brain imaging and cerebrospinal fluid analysis. Early and accurate detection through blood tests can facilitate timely intervention and better management of the disease, potentially slowing its progression and improving the quality of life for patients.
