## Abstracts

According to our (Global Info Research) latest study, the global Amine Blocked p-Toluenesulfonic Acid Catalyst market size was valued at US\$ 42.54 million in 2025 and is forecast to a readjusted size of US\$ 55.65 million by 2032 with a CAGR of 3.9% during review period.

Amine Blocked p-Toluenesulfonic Acid Catalysts are a special type of acidic catalyst that chemically combines a strong acid (such as p-toluenesulfonic acid) with an amine (amino group) to form a substance that does not exhibit the corrosive properties of a strong acid but releases the acid upon heating. They are primarily used in powder coatings and other systems, providing excellent storage stability, rapid curing characteristics, and good weather resistance.

The upstream core raw materials include p-toluenesulfonic acid (p-TSA) and various blocking amines. The downstream market mainly targets high-end industrial coatings. With increasing downstream demands for low VOC emissions and improved baking efficiency, this industry chain is rapidly evolving towards low-volatility, high-catalytic efficiency, and environmentally friendly solvent-based solutions.

In 2025, global sales are projected to be approximately 4,000 tons, with an average market price of around \$10,350 per ton. The industry's gross profit margin is expected to be in the range of 15%–30%.
