## **Abstracts**

According to our (Global Info Research) latest study, the global Amino Acid Biostimulant market size was valued at US\$ 1509 million in 2025 and is forecast to a readjusted size of US\$ 2734 million by 2032 with a CAGR of 9.0% during review period.

Amino acid biostimulants refer to a class of amino acid-based plant growth promoters. These biostimulants are usually composed of natural or synthetic amino acids and can promote plant growth and development through a variety of mechanisms. They can enhance plant stress resistance, improve nutrient absorption efficiency, promote root development, improve fruit quality, etc. Amino acids play an important role in plants, including participating in protein synthesis, regulating metabolic processes, and promoting the synthesis of growth hormones. The use of amino acid biostimulants can increase plant growth rate, enhance resistance to diseases and pests, and to a certain extent improve the plant's ability to adapt to environmental stress (such as drought, high temperature, etc.).
