Abstracts

According to our (Global Info Research) latest study, the global Ammonium Phosphate Dry Powder Fire Extinguishing Agent market size was valued at US\$ 646 million in 2025 and is forecast to a readjusted size of US\$ 986 million by 2032 with a CAGR of 6.3% during review period.

In 2025, global production of ammonium phosphate dry powder fire extinguishing agent reached 980,000 tons, with an average selling price of US\$641 per ton. Ammonium phosphate dry powder fire extinguishing agent, abbreviated as ABC dry powder fire extinguishing agent, is a composite fire extinguishing material composed of ammonium phosphate, anti-caking agents, flow promoters, silicone oil, and other additives. It has a specific particle size distribution, is finely ground, dry, and easily flows. It achieves high-efficiency fire extinguishing through a dual mechanism of physically isolating oxygen and chemically inhibiting chain reactions. It features rapid extinguishing speed, high extinguishing efficiency, good electrical insulation, long shelf life, and can be used in conjunction with foam fire extinguishing agents containing fluorocarbon surfactants. It is suitable for extinguishing Class A, Class B, and Class C fires, as well as fires involving electrical equipment, but not suitable for metal fires (such as magnesium and sodium) or acid/alkali fires. Ammonium phosphate dry powder fire extinguishing agent is generally filled in portable dry powder fire extinguishers, wheeled fire extinguishers, and dry powder fire trucks, and is used for fire prevention and fighting in oil depots, warehouses, ships, substations, cable tunnels, power distribution rooms, petrochemical facilities, and other similar locations. The upstream of the industry chain consists of phosphorus chemical raw materials (phosphates, monoammonium phosphate, etc.), additives and coating materials, and packaging materials; the midstream consists of manufacturers who carry out powder formulation and mixing, sieving and drying,

flowability and anti-caking treatment, testing (including moisture content, particle size, flowability and fire extinguishing rating verification), and filling into fire extinguishers/dry powder systems; the downstream consists of fire extinguisher manufacturers. The gross profit margin ranges from 15% to 25%.
