Anesthesia breathing filter is a medical device specially designed for use in anesthesia systems and ventilator circuits to filter and purify inhaled and exhaled gases. It removes bacteria, viruses, particles and other contaminants from the air through a high-efficiency particulate air (HEPA) filter or an electrostatic filter to ensure that patients breathe clean, sterile gases during anesthesia and mechanical ventilation. The filter helps prevent cross-infection and protects patients from respiratory infections, while also protecting anesthesia equipment and ventilators from contamination and extending their service life.
