The full name of the pet ultrasonic hemostatic knife is the animal ultrasonic soft tissue cutting hemostatic system. It is a medical device for surgical operations. It is suitable for soft tissue incision and hemostasis. It has the least thermal damage and has been widely used in various surgical operations. The ultrasonic frequency generator makes the metal blade generate the ultrasonic frequency to oscillate mechanically, so that the water molecules in the tissue are vaporized, the protein hydrogen bonds are broken, the cells are disintegrated, the tissue is cut or coagulated, and the blood vessels are closed.

As a new type of pet medical equipment, pet ultrasonic scalpel has many advantages and application prospects. The pet ultrasonic scalpel uses ultrasonic technology to perform coagulation and repair while cutting tissue, reducing operation time and postoperative recovery time. Compared with traditional surgical methods, pet ultrasonic scalpel has higher precision and less trauma, which can significantly improve the surgical effect and the quality of life of pets.
