According to our (Global Info Research) latest study, the global Anti Adhesion Gel market size was valued at US\$ 239 million in 2024 and is forecast to a readjusted size of USD 373 million by 2031 with a CAGR of 6.6% during review period.

Anti-adhesion gel is a medical product used to reduce the formation of scar tissue and adhesions after surgical procedures. Adhesions are fibrous bands of scar tissue that can form between organs or tissues, causing them to stick together. Anti-adhesion gels are designed to create a physical barrier between adjacent tissues, preventing them from adhering to each other during the healing process. The gel is typically applied directly to the affected area during surgery and forms a thin, transparent, biocompatible layer that acts as a lubricant and reduces friction between tissues.

The global market for anti-adhesion gel is driven by various factors, including the increasing number of surgical procedures, the growing awareness about the complications associated with adhesions, and the need for effective solutions to minimize post-operative adhesion formation. Geographically, the market for anti-adhesion gel is expected to be significant in regions with a high volume of surgical procedures, such as North America, Europe, and Asia Pacific. These regions have well-established healthcare infrastructures, a large patient population, and a high prevalence of surgical interventions, driving the demand for anti-adhesion products.
