Anti-inflammatory drugs for dental use are medications designed to reduce inflammation and alleviate pain associated with dental conditions, such as toothaches, gum disease, or post-operative discomfort. Common classes include nonsteroidal anti-inflammatory drugs (NSAIDs) like ibuprofen and naproxen, which work by inhibiting enzymes that contribute to inflammation. These medications help manage pain and swelling, making dental procedures more tolerable. In some cases, corticosteroids may be prescribed to address more severe inflammation. Proper use of anti-inflammatory drugs can enhance recovery and improve overall oral health outcomes in patients undergoing dental treatment.
