## Abstracts

According to our (Global Info Research) latest study, the global Antibody Characterization Services market size was valued at US\$ 86.5 million in 2024 and is forecast to a readjusted size of USD 127 million by 2031 with a CAGR of 5.3% during review period.

Antibody characterization is the process of analyzing and understanding the properties and behaviors of antibodies, including their interactions, binding affinity, stability, and modifications. Antibody characterization is important in research and biopharmaceutical development. All therapeutic proteins produced from current technologies have heterogeneities in the final product because various modifications occur during different stages of production. Due to these heterogeneities, thorough characterization is necessary for the reproducible and safe production of therapeutic proteins.
