Abstracts

According to our (Global Info Research) latest study, the global AR Glasses MicroDisplay market size was valued at US\$ 415 million in 2024 and is forecast to a readjusted size of USD 988 million by 2031 with a CAGR of 13.3% during review period.

Micro displays are used to provide display content for AR glasses. They can be self luminous active devices such as light-emitting diode panels (such as micro OLED and micro LED), or liquid crystal displays that require external light source illumination (including transmissive LCD and reflective LCOS). In addition, there are also digital micro mirror arrays (DMD, the core of DLP) and laser beam scanners (LBS) based on microelectromechanical systems (MEMS) technology. The combination of micro displays and optical components used in AR glasses in the market is a key part of achieving AR functionality. For example, our Tianzhe G600AR glasses adopt a MicroLED+waveguide solution, where the MicroLED micro display screen uses JBD's first generation optical products, equipped with a 0.13-inch 0.55cc Micro LED micro display screen, with a power consumption of only 100 mW, an overall optical weight of 0.6g, and an average in eye brightness of 1150nit.

Micro displays used in augmented reality (AR) applications require very high brightness, so that users can clearly see images when using the device in bright daylight conditions and in applications that support perspective. A micro display screen is a small screen used to provide AR display content, because AR glasses need to be made almost the same size as regular glasses, the display screen needs to be made very small, while providing high resolution and sufficient brightness. Currently, Micro OLED is the mainstream display solution for AR glasses, with a market share of up to 70% and a shipment volume of 670000 pieces; The shipment volume of Micro LED displays in

2022 is 30900 pieces; In addition, in 2022, the shipment volume of LBS modules for AR glasses was 188700, LCoS was 69300, and DLP was 3200. It is reported that in 2022, the Chinese AR glasses market will see new vitality: many manufacturers will enter the AR glasses track, and related hardware new products will be released intensively. According to incomplete statistics, more than 30 AR glasses products will be released or exposed in 2022; The manufacturers entering the AR glasses market include traditional consumer electronics leaders such as Lenovo, TCL, Huawei, OPPO, Xiaomi, as well as innovative companies such as Thunderbird Innovation, Nreal, Xiaopai, and Dreambloom. Driven by numerous brands and new hardware products, there has been a significant increase in VR and AR consumer hardware shipments in China in 2022. For the development prospects of XR (AR/VR/MR) hardware market, Omdia market analysts also give optimistic predictions: global XR hardware shipments will grow from 24 million units in 2023 to nearly 90 million units in 2028, with a compound annual growth rate of 67%.
