The waterproof film formed by the curing of the waterproof coating has a certain degree of extensibility, elasticity, plasticity, crack resistance, impermeability and weather resistance, which can play a role in waterproof, anti-seepage and protection.

With the continuous development of urban construction, the demand for waterproofing in buildings has become increasingly prominent, leading to a gradual rise in the significance of architectural waterproof coatings in the market. These coatings not only effectively prevent structural damage due to rain and humid climates but also extend the lifespan of buildings. In recent years, as people's expectations for building quality and durability have risen, there is a growing demand in the market for high-quality waterproof coatings. Moreover, with the increasing awareness of environmental protection and sustainable development, products incorporating eco-friendly materials in the formulation of architectural waterproof coatings are favored by consumers.
