Arthritis compression gloves are an auxiliary treatment tool specially designed for arthritis patients. The gloves can reduce swelling and pain in the joints by applying appropriate pressure to the joints of the hands. This pressure helps to promote blood circulation and reduce the accumulation of inflammatory substances, thereby relieving arthritis symptoms. Compression gloves can provide a certain support and stability to help arthritis patients better control the hand joints during activities. This is very important to prevent joint sprains and further injuries. In the process of arthritis development, if it is not controlled, the joints may become deformed. Compression gloves can prevent the occurrence of deformities to a certain extent and maintain the normal shape of the joints.
