Abstracts

Cold Milling Machine (also known as a cold planer, pavement planer, pavement recycler or rotomill) is a piece of heavy equipment used to remove old asphalt pavements and surfaces from roadways, resulting in an even surface. The machine's revolving cutting head cuts into the pavement at a predetermined depth and cross slope and removes the reclaimed asphalt pavement (RAP). The milling machine is equipped with a conveyor which deposits the RAP into a transport truck, or the RAP can be left in place (wind-rowed) to be removed at a later date or used in recycling.
