Abstracts

Water Dispenser or water cooler is connected to the mains and provide an instant supply of not only chilled water but also boiling hot and hot water. They are generally broken up in two categories: bottleless and bottled Water Dispenser. Bottleless or plumbed in Water Dispenser are hooked up to a water supply, while bottled Water Dispenser require delivery (or self-pick-up) of water in large bottles from vendors.

Cooling and heating methods

Usually units offer a refrigeration function to chill the water. Some versions also have a second dispenser that delivers room-temperature water or even heated water that can be used for tea, hot chocolate or other uses. The water in the alternate hot tap is generally heated with a heating element and stored in a hot tank (much like the traditional hot water heaters used in residential homes). Additionally, the hot tap is usually equipped with a push-in safety valve to prevent burns from an accidental or inadvertent pressing of the lever.
