Abstracts

Liquid Crystal Polymer (LCP) Films and Laminates are produced from basic raw materials such as thermoplastic LCP resins in the form of pellets or granules. Benzoic acid and p-Hydroxy naphthoic acid are other key raw materials used in the synthesis process. Liquid Crystal Polymer (LCP) Films and Laminates form areas of highly ordered structures when in the liquid phase but the degree of order is less than that of a regular solid crystal. Liquid Crystal Polymer (LCP) Films and Laminates are fire resistant at high temperatures and chemically resistant in very thin walled applications. Liquid Crystal Polymer (LCP) Films and Laminates are typically used for medical applications, including trays and drug delivery systems, and in diagnostics for the automotive and telecommunication industries.
